Project Name	Farm Management System
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the Farm Management System codebase in terms of its structure, readability, and reusability. The project follows a clear file structure, meaningful naming conventions, modular design, basic comments, reusable functions/modules, and appropriate error handling to support maintainability and future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs are used throughout the code.	Yes	Consistent formatting is maintained.
2	Proper File Structure	Files and folders are logically organized.	Yes	Frontend, backend and database files are separated.
3	Meaningful Variable Names	Variables reflect their purpose clearly.	Yes	Names such as crop, field, worker, expense and harvest are descriptive.
4	Function / Method Names	Functions are descriptively named.	Yes	Functions use clear action-based names for CRUD operations.
5	Code Comments	Inline and block comments explain logic where needed.	Yes	Comments are added for important sections and operations.
6	Modular Design	Code is split into reusable functions/modules.	Yes	Farm modules are separated for easier maintenance and reuse.
7	No Redundant Code	Duplicate or unused code is removed.	Yes	Common operations are handled through reusable functions.
8	Error Handling	Exceptions and errors are handled carefully.	Yes	Validation and database/application errors are handled.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level (High / Medium / Low)
1	Database Connection Module	Python / Flask / SQL	Used by Crop, Field, Worker, Resource and Expense modules.	High
2	CRUD Helper Functions	Python / Flask	Used for add, view, update and delete operations.	High
3	Form Validation Module	Python / Flask / JavaScript	Reused across farm data entry forms.	High
4	Navigation / Dashboard Components	HTML / CSS / JavaScript	Used across the main pages of the system.	Medium
5	Database Models / Tables	SQLite / MySQL / SQL	Shared by all modules that store and retrieve farm records.	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	The project is organized into logical frontend, backend and database sections.
Readability	5	Clear naming, indentation and simple module structure make the code easy to understand.
Reusability	5	Common database, validation and CRUD operations are designed for reuse.
Documentation / Comments	4	Important modules and operations are documented with suitable comments.
Overall Score	5	The code structure supports maintainability, reuse and future enhancements.
