Project Name	Farm Management System
Maximum Marks	5 Marks

Coding & Solution

This document evaluates the quality and completeness of the implemented Farm Management System. The solution is designed to provide working functionality for managing farm information, including fields, crops, activities, workers, resources, expenses and harvest records, with organized code and database support.

Instructions:

1. Ensure the code is well-structured, commented, and follows best practices for the selected technology stack.
2. The solution should address the core farm-management problem and implement the key functional requirements.
3. Include source files, configuration files, database files/schema and setup instructions needed to run the application.
4. Attach or link the project code repository in the table below.

Solution Summary

Field	Details
Repository Link / URL	GitHub repository: Farm-Management-System (repository created; project URL to be used from the team's GitHub account).
Programming Language(s)	Python, HTML, CSS, JavaScript, SQL
Framework(s) Used	Flask
Key Features Implemented	Farm dashboard; field management; crop management; farm activity management; worker management; resource management; expense management; harvest management; CRUD operations; database storage; form validation.
Pending / Incomplete Features	Advanced enhancements such as user authentication/role management, weather integration, AI-based crop assistance, advanced reports/charts and cloud deployment can be added in future versions.
Setup / Run Instructions	Install Python and required dependencies; configure the database; run the Flask application; open the local application in a web browser. Keep the project files and database configuration in the repository.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Farm Management System follows a modular web-application structure using Flask, HTML, CSS, JavaScript and SQL. The project focuses on practical farm record management and CRUD-based operations. The codebase is organized so that additional modules and future enhancements can be integrated without redesigning the complete application.
