Project Proposal (Proposed Solution) report

The proposal report aims to simplify farm management by providing a centralized digital platform for managing crops, farm activities, expenses, records, weather information and market details. The system reduces manual work, improves decision-making, supports better planning, and helps farmers manage their farms efficiently.

Project Overview:

Objective	The primary objective is to develop a simple and efficient Farm Management System that helps farmers manage daily farm activities, crop information, expenses, records, weather information and market details in one platform.
Scope	The project covers crop and farm activity management, expense and record tracking, weather and market information, and centralized access to farm-related data.

Problem Statement:

Description	Farmers often depend on manual records and scattered information, making it difficult to track crops, expenses, farm activities, weather and market details efficiently.
Impact	Solving these issues can reduce manual effort, improve record accuracy, support timely decisions, and help farmers improve productivity and manage costs.

Proposed Solution:

Approach	Develop a user-friendly Farm Management System that centralizes farm records and provides simple modules for crop management, activity tracking, expenses, weather information and market details.
Key Features	- Crop and farm activity management. - Expense and record tracking. - Weather information and market details. - Centralized dashboard and easy access to farm data. - Simple and user-friendly interface.

Key Features (continued):

Additional Points	- Real-time weather updates and market rates. - Easy data entry and management. - Secure and organized storage of farm records. - Accessible from multiple devices (desktop/laptop/mobile).

Resource Requirements:

Resource Type		Description	Specifications / Allocation
Hardware	Computing Resources	Laptop / PC	-
	Memory	RAM	8 GB
	Storage	Storage Space	256 GB SSD or higher
Software	Frameworks	Web Development	HTML, CSS, JavaScript and Python Flask (or similar backend)
	Libraries	Required Libraries	Bootstrap, pandas and relevant libraries
	Development Environment	IDE	Visual Studio Code
Data	Data	Sample Datasets	Farm/crop/expense/weather/market sample datasets in CSV format
