Project Name	FARM MANAGEMENT SYSTEM
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

Farm-Management-System/
├── backend/
│   ├── app.py
│   ├── models.py
│   ├── routes.py
│   ├── requirements.txt
│   └── .env.example
├── frontend/
│   ├── index.html
│   ├── style.css
│   └── script.js
├── database/
│   └── farm_management.sql
└── README.md
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted (Run Locally)
Login Credentials (Demo)	Username: admin Password: admin123
Platform / Hosting Provider	Local Machine (Python + Flask)
Repository Link	https://github.com/your-team/farm-management-system
Demo Video Link	Not Provided (NA)

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install Python (version 3.8 or above) from python.org.
2. Install the required packages: `pip install -r requirements.txt`
3. Navigate to the project folder: `cd Farm-Management-System`
4. Set up the database (MySQL) and import: `database/farm_management.sql`
5. Configure database details in `.env.example` and rename to `.env`.
6. Run the application: `python app.py`
7. Open browser and go to: `http://localhost:5000`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Email notifications not implemented	Planned for future update
2	Mobile app not available	Not developed
3	Real-time weather data integration	Not integrated (can be added later)
